Sveedbrook

I keep having interesting
fragments from Julian Hoptman
and I have just been through
a large pile of USSR publications.

Do you wish to discuss any
further?

Will there be a ~~an~~ investigation?

EPIDEMIOLOGICAL ANALYSIS OF SIBERIAN ULCER INFECTIONS AT SVERDLOVSK

Moscow ZHURNAL MIKROBIOLOGII EPIDEMIOLOGII I IMMUNOBIOLOGII in Russian
No 5, May 1980 pp 111-113

[Article by I. S. Bezdenezhnykh and V. N. Nikiforov, of the Main Sanitary and Epidemiological Administration of the RSFSR Ministry of Health and the Central Order of Lenin Institute for the Advanced Training of Physicians, Moscow]

Skin, intestinal, pulmonary and septic forms have been described in man until recent times.. It is considered that any clinical form of the disease can be complicated by Siberian ulcer sepsis, and separation of the primary intestinal and pulmonary forms is acknowledged to be provisional. Therefore it has been proposed that, along with the skin, only the septic (visceral) form of Siberian ulcer be distinguished. ?

In the past, multiple cases of the visceral form of Siberian ulcer were often observed because of the slaughter of cattle on the farm and the unprofessional processing of meat at small enterprises [11]. However, a large portion of the flareups and especially of family infections has remained undescribed, and information about them has been preserved only in the files.

MAR 30 1981

This assertion is so ad hoc, and so contrary to previous Soviet literature that it, of course, provoked some discussion on our part.

Is there any ambiguity about the translation?

Do these same authors appear in any previous author literature! The Lenin Institute?
